

KELLEN STUART

SENIOR SOFTWARE ENGINEER

linkedin.com/in/kellenstuart

Senior leader with a track record of success in translating business challenges and changing user needs into innovative new features and products for companies including Tech Disc, Tasso Inc., and Lockheed Martin. Highly skilled in leveraging cross-functional collaboration to ensure the on-time completion of end-to-end software development and engineering lifecycles.

Professional Experience

Senior Full Stack Developer, Tech Disc

Dec 2025 - Present

Build and maintain a web platform for a disc golf simulator that helps users improve throw performance through actionable throw analytics.

- Led Bluetooth connectivity hardening to improve reliability for production device-to-web communication.
- Building support for connecting multiple Bluetooth-enabled discs to a single web application session.
- Developing end-to-end features across React frontends and Node.js services.
- Performed security vulnerability patching by remediating dependency and package vulnerabilities in the web application stack.
- Working within a modern cloud and developer workflow including Google Cloud Firebase Storage, TypeScript, GitHub Actions, WSL2 Ubuntu, Zsh, and Copilot.

Senior Full Stack Developer, Tasso Inc.

Dec 2021 - Nov 2024

Led the design, development, and launch of high-impact tools and features leveraging TypeScript, React, Python, C# .NET, Entity Framework Core, AWS CDK, and Nest.JS.

- Led the planning and execution of projects such as the TassoCare API <https://docs.tassocare.com/> and the TassoCare Portal <https://portal.tassocare.com/>, which required consistent cross-functional collaboration and communication to ensure the on-time, within budget completion of all objectives.
- Enabled the services team to fulfill orders by adding features and fixing bugs in the TassoCare Admin Portal.
- Spearheaded end-to-end integration testing using Jest, Gherkin and Selenium to ensure quality in the TassoCare product line-up.
- Architected a fully scalable feature flagging solution using Gitlab / Unleash / AWS CDK which enabled Tasso to develop new features quickly without immediately releasing them.
- Built a .NET 8 GraphQL API on top of the existing blood-device database using Entity Framework scaffolding, enabling clients to request only needed fields and reducing front-end data joins.
- Worked closely with product management in an Agile environment to ensure the timely delivery of features and bug fixes.

Software Engineer, Tyler Technologies

Aug 2018 - Dec 2021

Played an active role as a member of a team of engineers tasked with developing C# .NET web applications, mobile applications, and a GraphQL API essential for the success of InSite.

- Recognized by executive team for the facilitation of company pivots in response to the new challenges of the COVID-19 pandemic.
- Authored hundreds of thousands of lines of code during the creation of new tools essential for maintaining business operations during the pandemic.
- Developed C# .NET Core full stack applications using Blazor / Razor Pages, Entity Framework, TypeScript, and Microsoft SQL Server.

Software Engineer II, Lockheed Martin

Dec 2015 - Mar 2018

Supported a missile defense system by integrating new technologies.

- Supported Java development of missile defense system.
- Upgraded internal employee tracking system stored in Excel by building a new Angular web application with a Mongo DB supporting advanced features.
- Automated repetitive tasks for the IT team by writing scripts in Powershell.
- Administrator of highly secure RedHat Linux systems which requires a deep understand of unix-like systems.

Education

Bachelor of Computer Science, Western State Colorado University, 2016 - GPA 3.94/4.0 Summa Cum Laude

Certifications

CompTIA Security +, 2016
